

Anatomy of a Living System

Re-engineering the Koshas for modern cybernetics, neuroscience, and systems theory.

RETHINKING THE HUMAN SYSTEM: FROM STATIC LAYERS TO CYBERNETIC CYCLES

The traditional model obscures the reality of dynamic feedback loops. For centuries, the Koshas have been taught as static sheaths—like an onion or a Russian nesting doll. This metaphor fails to capture the continuous, multi-directional flow of energy, meaning, and attention that defines a living human system.

THE TRADITIONAL MODEL

Static sheaths with no interaction mechanism.

THE CYBERNETIC REALITY

Interacting subsystems driving real-time regulation.

Translating ancient sheaths into functional subsystem architecture.

The System Architecture Matrix

Subsystem	Classical Definition	Modern Control Role	Car Metaphor
Annamaya	Physical body	Material substrate (hardware)	Chassis / Engine
Pranamaya	Vital energy	State regulation (power)	Drivetrain / Responsiveness
Manomaya	Lower mind/emotion	Salience + narrative (dashboard)	Dashboard / Sensors
Vijnanamaya	Higher mind/buddhi	Discrimination (control logic)	Driver Intelligence
Anandamaya	Bliss sheath	Global coherence (low-friction condition)	The harmonized driving state

Annamaya is a high-cohesion energy conversion system.

From the perspective of physics, there is nothing requiring the physical body to hold together.
It is an active field of condensed energy fiercely resisting the universal force of **entropy**.

Material Substrate / Hardware

Pranamaya dictates the capacity for dynamic state transitions.

Just as a vehicle must shift from 2-wheel drive on a highway to 4-wheel drive in the jungle, the human system requires different energy states for different environmental landscapes. Inability to shift gears leaves the system stuck.

Manomaya constructs meaning through real-time attention management.

A perfect vehicle is useless if the driver ignores the road. Manomaya acts as the dashboard and alert system. Survival depends on routing attention away from internal playlists and directly toward immediate environmental threats.

Vijnanamaya optimizes the system via macroscopic pattern recognition.

True mastery is recognizing the pattern of the landscape and choosing alternate routes. This control logic evaluates uncertainty and places the self within a universal context.

The Point-Self (Reactive)

Expanded Vision (Predictive)

Anandamaya is not a hidden component. It is a field condition.

The metaphor of the car breaks down here. Anandamaya is not a part you can locate. It is the emergent baseline coherence of all four subsystems functioning flawlessly together, resulting in the complete absence of internal friction.

Attention is a dynamic routing function shaped by the entire system.

Attention is not housed in a single layer. It is the ultimate system-wide selection pressure output, dependent on energy bandwidth, cognitive salience, and conscious override.

Emotion is a state-coupling mechanism between body, energy, and meaning.

Emotion spans multiple bodies. It acts as a predictive regulation system, combining raw physiological arousal with cognitive narrative to create a unified directional drive.

Bhakti acts as a global priority override, eliminating internal entropy.

- Bhakti acts as a global coherence attractor, placing a single-thread lock on the identity system and seamlessly reorganizing all subsystems around one meaning axis.

Before Bhakti: High Entropy

Competing identity loops & fragmented drives

After Bhakti: Low Entropy

Single meaning axis & global priority override

Yoga traditions are targeted maintenance protocols for specific system interfaces.

The System Interface Matrix

Protocol	Interface Targeted	System Effect
Hatha	[Annamaya ↔ Pranamaya]	Stabilizes embodiment and structural energy flow.
Kriya	[Pranamaya ↔ Manomaya ↔ Vijnanamaya]	Stabilizes internal transitions and still-point access.
Raja	[Manomaya ↔ Vijnanamaya]	Stabilizes attention and separates discrimination from noise.
Bhakti	[Manomaya ↔ Vijnanamaya → Anandamaya]	Unifies emotional meaning into a single attractor.
Jnana	[Vijnanamaya → System Output]	Dissolves identification with the hardware entirely.

The Human Operating System: Integrated Architecture.

Where was my attention most directed today?

By treating the self as a living control system, we replace vague frustration with precise inquiry.
Evaluate the cohesion of your structure, the transition of your energy, and the routing of your attention daily.
